

# LABORATORY HOODS

In the laboratories of the institute, we have different types of extractor hoods:

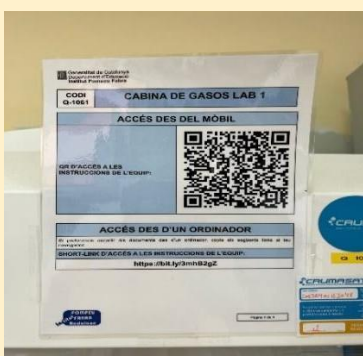

LABORATORY	TYPES OF HOODS
1	Basic (2 units)
1	Basic +filter
4	Laminar flow
4	New CBS

Last year, your colleagues met a challenge, they created usage tokens for each of the hoods.

Each of the hoods has a QR code and if you proceed to read it, it will take you to the usage sheets that your colleagues wrote.

In this activity we are going to propose you to **convert** these usage sheets into short explanatory videos.

**Per group**, you must proceed to read the QR code of the bell that has been assigned to you and make a short video where everything indicated in the file is reflected.

We leave you here an **example** of what we expect from you.

Once the activity is done, you must turn it in the classroom of the subject!

The screenshot shows a classroom management interface for the subject 'M5 SAFETY IN THE PHARMACEUTICAL INDUSTRY'. The interface includes a sidebar with 'Tots els temes' and a main content area with a 'Crea' button and a list of tasks. The tasks are: 'FIREFIGHTING AND EMERGENCY' (Publicat el dia 17:06), 'LABORATORY HOODS' (Publicat el dia 17:07), and 'AIR POLLUTION' (Publicat el dia 17:07). A red arrow points to the 'LABORATORY HOODS' task.
